Tan, Yu-hua

Mathematics understanding of mathematics teachers - exploration on a successful training for persons qualified to teach.

J. Math. Educ. (Tianjin) 13, No. 1, 83-86 (2004).

Traditional teaching ideas and methods made students haven't a good mathematics understanding. Therefore, many students feared of mathematics or even abandoned it. I thought teachers' neglecting mathematics understanding was a main reason. Some teachers hadn't understood and mastered deeply mathematics because of their backward teaching ideas and methods. Thus, an effective system of teachers training should be set up, moreover, mathematics understanding should be emphasized in every level of teachers training.
