Use of the Talking Tactile Tablet in Mathematics Testing.

J. Vis. Impair. Blind. 97, No. 2, 85-96 (2003).

This article describes an experimental system for administering multiple-choice math tests to students who are visually impaired or have other print disabilities. Using a new audio-tactile computer peripheral device called the Talking Tactile Tablet, a preliminary version of a self-voicing test was created for eight participants. (Contains references.) (ERIC)
