

ZMATH 1997e.02838

Fendel, Dan

What Is the Place of Algebra in the K-12 Mathematics Program.

NASSP Bull. 81, No. 586, 60-63 (1997).

As times change, so has the role of algebra in the educational program. The Interactive Mathematics Program (IMP) offers secondary students an opportunity to learn algebra in a college preparatory sequence that combines basic skills, problem solving, and conceptual understanding while integrating algebra into a problem-based program. Designed for all grade levels, IMP stresses interconnections among various mathematics branches, embedding math into meaningful problem-solving contexts. (ERIC)
