**A Peer-Tutoring Scheme to Support Independent Learning and Group Project Work in Mathematics.**

Assess. Eval. High. Educ. 21, No. 3, 251-66 (1996).

A peer-tutoring project in undergraduate mathematics at a university in the United Kingdom was designed both to provide support for independent learning tasks and for group projects. A survey of students found that while most liked and felt they benefited from the group experience, most also did not like the independent learning tasks. (ERIC)
