Perfect parallelograms.

Am. Math. Mon. 119, No. 6, 513-515 (2012).

Summary: A parallelogram, with its sides and diagonals being positive integers, is called a perfect parallelogram. Up to scaling we find a parameterization for all perfect parallelograms (quadruples). As a special case, we determine the perfect rectangles (Pythagorean triples).

Classification: G45

Keywords: perfect parallelograms
