**The educational website of the Catalan Institute for Statistics. (La web educativa del Instituto de Estadística de Cataluña.)**

Uno 18, No. 59, 18-25 (2012).

Summary: Digital resources such as educational websites are a key tool for promoting statistical culture in a school environment. They are also useful for creating and strengthening a new group of users of official statistics. The Catalan Institute for Statistics (Idescat) has set up its own educational website: <http://aprenestadistica.gencat.cat>. It is aimed at secondary teachers and students and features 25 activities with a glossary and helpful animations. Its main characteristic is that it is connected to the Idescat databases, which means it works with real-life, up-to-date data in present-day contexts that young people can relate to.
