Proofs and constructions on the Poincare half-sphere model. (Bizonyítások és szerkesztések a Poincare-féle félgömb modellen.)
Polygon 23, No. 1-2, 103-121 (2016).

From the introduction: In a recent article we introduced the Poincare-model and reflection with respect to a line. We proved that for any two distinct points there exists a line such that the reflection of the first point with respect to the line is just the second point. In this article we make further remarks, present new proofs, give counter examples and perform constructions on the model.

Classification: G90
Keywords: Poincare-model
