Wawro, Megan

Finding synergy among research, teaching, and service: an example from mathematics education research.

Dewar, Jacqueline (ed.) et al., Mathematics education. A spectrum of work in mathematical sciences departments. Cham: Springer (ISBN 978-3-319-44949-4/hbk; 978-3-319-44950-0/ebook). Association for Women in Mathematics Series 7, 135-145 (2016).

Summary: Being a faculty member in higher education involves the balance and integration of various roles and demands. In this chapter I present my own story, as a mathematics education researcher in the teaching and learning of undergraduate mathematics focusing on linear algebra. Using my experience as an example, I describe how synergy among research, teaching, and service can impact career goals and institutional needs.

Classification: D20 B40

Keywords: research in undergraduate mathematics education; RUME; linear algebra; research; teaching and service
