Squaring yin and yang. (La quadrature du yin et du yang.)

Quadrature 97, 12-14 (2015).

Summary: A simple geometric construction allows us to construct a square having approximatively the same area as a given disk. The value of the ratio of these areas is computed by two different methods (analytic and geometric).

Classification: G40 G80

Keywords: square; circle; parallels; parametric equation; trigonometry
