

ZMATH 2013c.00332

Littler, Graham; Jirotková, Darina

Mathematics out of school. (Matematika mimo školu.)

Učitel Mat. 18, No. 1, 44-48 (2009).

Summary: In the introductory part of the article, the author expresses the need to present mathematical problems from real life. She emphasises that pupils need to get the feeling that mathematics is not a science without the real use and therefore she presents a set of six problems, which are connected to the real world. For every problem, we can find here also motivation or description how to present the problem to pupils and how to bring it closer to them.

Classification: D80 F90 M10

Keywords: application of mathematics; motivational problem; real-life problems
