**Toffalori, Carlo**

**Reminiscences of Gödel reading Borges.**

Lett. Mat. Pristem 72, 14-23 (2009).

This paper concerns the several echoes the reader can find between Borges' novels and mathematical topics, such as its certainty and its paradoxes, logic and Goedel's incompleteness, metamathematics and infinite: a series of links that recall general themes, from language to religion.
