**Pivot tables in seven minutes.**

Math. Teach. Inc. Micromath 2008, No. 207, 44-45 (2008).

Summary: Pivot tables are fearsome to some and yet the answer to everything to others. They are Excel's tool for producing tables where you can change columns and rows around at will – pivoting them, hence the name. If you have never tried one before, here's an introduction in practically seven minutes, with the proviso that you start the clock after you have opened Excel.

*Classification:* R70

*Keywords:* spread sheets; application software; percentages; averages; data grouping
