Unethical computer using behavior scale: A study of reliability and validity on Turkish university students.

Comput. Educ. (Exeter) 48, No. 2, 205-215 (2007).

This study was carried out in a Turkish university with 216 undergraduate students of computer technology as respondents. The study aimed to develop a scale (UECUBS) to determine the unethical computer use behavior. A factor analysis of the related items revealed that the factors were can be divided under five headings; intellectual property, social impact, safety and quality, net integrity and information integrity.

Classification: Q45 R15

Keywords: Human-computer interface; Computer ethics; Computer unethical behavior; University students
