**Which courses for the education of the math teacher? Klein's work and its influence in Italy.**

The great importance of Felix Klein's vision of geometry as the study of the properties of a space that are invariant under a given group of transformations, known as the Erlangen Program (1872) is discussed by pointing out the influences in the evolution of three Italian mathematicians: Corrado Segre (1863–1924), Gino Fano (1871–1952) and Guido Castelnuovo (1865–1952). *Mircea Crășmăreanu (Iași)*
