

ZMATH 2007a.00290

Hoare, Graham

Markov numbers.

SYMMetryplus, No. 31, 6-7 (2006).

Summary: The author looks first at some particular solutions to the Diophantine equation $x^2 + y^2 + z^2 = 3xyz$, when $z = 1$ and $z = 2$. She then explains how to generate all possible solutions.

Classification: F60

Keywords: Diophantine equations; Pell's equations; solution strategies
