Epsilon (Puerto Real) 19, No. 57, 357-378 (2003).

This study investigates the idea of "in advance exercise", based on specific stimulus texts in situations of autonomous and collaborative problem-solving, as defined by Vygotsky, within the zones of proximal and potential development, with a view to identifying types of behavioural strategies linked to a range of variables (see also ZDM/MathDi 2004(4) C32).
