Tlustý, Pavel

Paradoxical problems from probability. (Paradoxní příklady z pravděpodobnosti.)

Učitel Mat. 10, No. 1, 37-42 (2001).

The author presents two worked-out probability problems whose results are surprising and paradoxical. For each problem, the intuitive result is given and the whole solution is presented and described in detail. There are eight pictures which enhance the understandability of the solution.

Classification: K50
