North, Delia (ed.); Reston, Enriquet (ed.); Cordani, Lisbeth (ed.); Petocz, Peter (ed.)

A global view of statistics education research.

Stat. Educ. Res. J. 13, No. 2, 6-10, electronic only (2014).

From the text: Statistics education is carried out in most countries, and research in statistics education also occurs in many of these countries, as we know from the proceedings of the International Conferences on Teaching Statistics (ICOTS). So what is the 'story' from these other countries? Are they carrying out studies similar to those from the USA, Australia, Spain and Britain, or are they addressing different research questions, utilizing different approaches and methods? This was the particular question that we sought to investigate with the preparation and publication of this special issue: A Global View of Statistics Education Research.

Classification: A60 D20 K40 K70 K80

Keywords: statistics education research
