Foldable triangulations of lattice polygons.

Am. Math. Mon. 121, No. 8, 706-710 (2014).

Summary: We give a simple formula for the signature of a foldable triangulation of a lattice polygon in terms of its boundary. This yields lower bounds on the number of real roots of certain systems of polynomial equations known as “Wronski systems”.

Classification: G95

Keywords: foldable triangulation; lattice polygon
