D'Amore, Bruno

**Selected aspects of students' logic and strategic behaviour in mathematical problem solving.
(Considerazioni su alcuni aspetti del comportamento logico e strategico degli studenti al momento della risoluzione di problemi di matematica in ambito scolastico.)**

Insegn. Mat. Sci. Integr. 22A, No. 5, 423-440 (1999).

In this paper we explain the behaviour and the logic actually used by students when they are searching for strategies to solve school problems. In arriving at a definition and at an exemplification of this idea, we have profited from many students' protocols, collected from different investigations of the author over the years. (Orig.)
