

**ZMATH 1999e.03199**

**Bibby, Tamara**

**Developing mental maths with 9-11 year olds.**

Scholastic Ltd., Leamington Spa (ISBN 0-590-53765-2). 64 p. (1997).

Each book in this series explains how to manage appropriate oral maths sessions, offers guidance on the range and size of numbers to use, provides a progression of strategies the children might suggest (or that the teacher might like to introduce), contains a source of challenges, investigations and games, and supports the discussion through which the children will exchange their ideas. This volume: reinforces previous experience of counting and place value; consolidates and develops facility with the four operations; and provides problems involving multi-step and mixed operations to extend the children's skills.
