Foster, Colin; Martin, David

Two-dice horse race.

Teach. Stat. 38, No. 3, 98-101 (2016).

Summary: We analyse the “two-dice horse race” task often used in lower secondary school, in which two ordinary dice are thrown repeatedly and each time the sum of the scores determines which horse (numbered 1 to 12) moves forwards one space.

Classification: K53 K93

Keywords: teaching; statistics; simulations to estimate probabilities; two-dice experiment; Markov processes
